TASK 01

SETTING UP VIRTUAL LAB

AND EXPLORING WAZUH

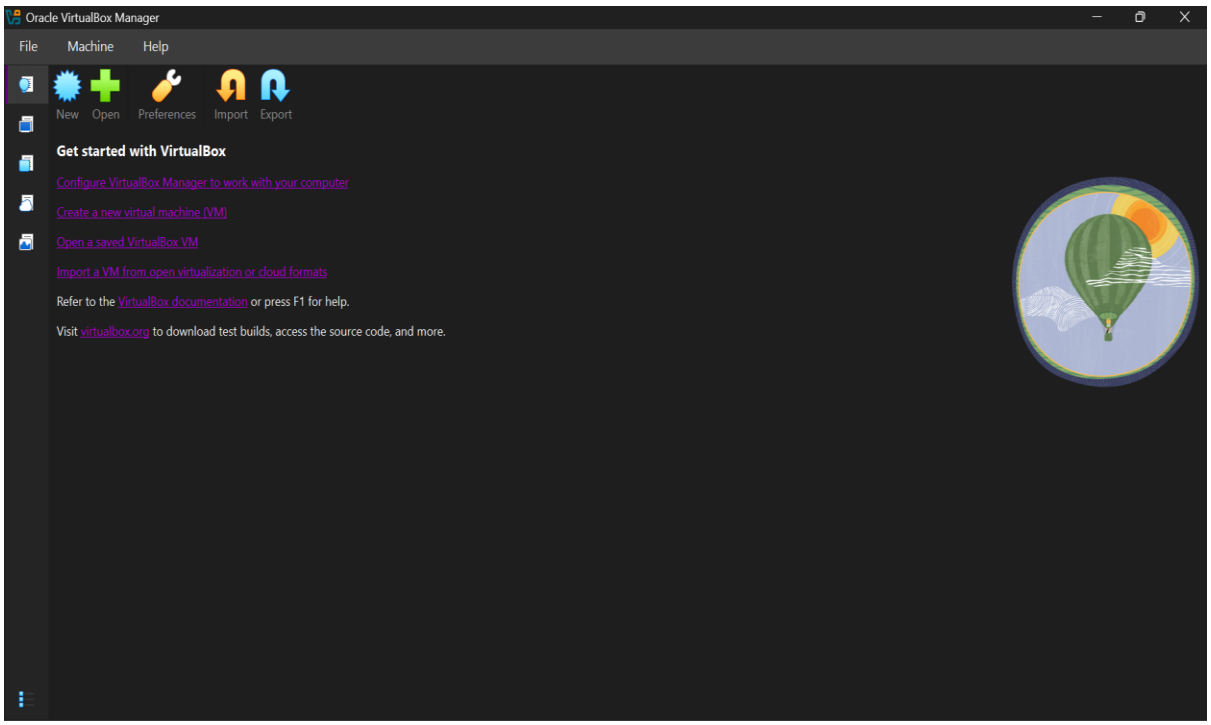

AHSAN ARFEEN SHAIKH

DAWOOD UNIVERSITY OF ENGR AND TECH, KARACHI

SOC ANALYST INTERNSHIP

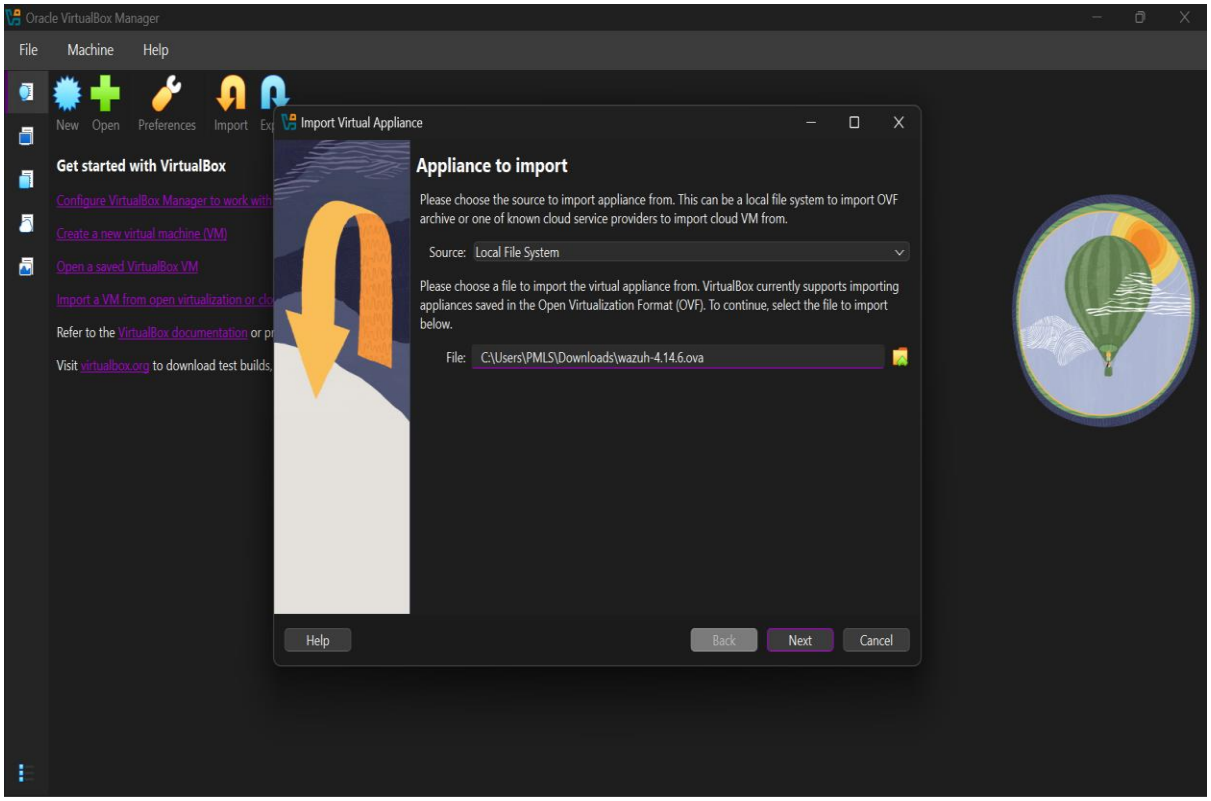

STEP 01: INSTALL VIRTUAL BOX

INSTALLED ORACLE VIRTUAL BOX ON WINDOWS TO CREATE VIRTUAL MACHINES OF WAZUH AND KALI LINUX

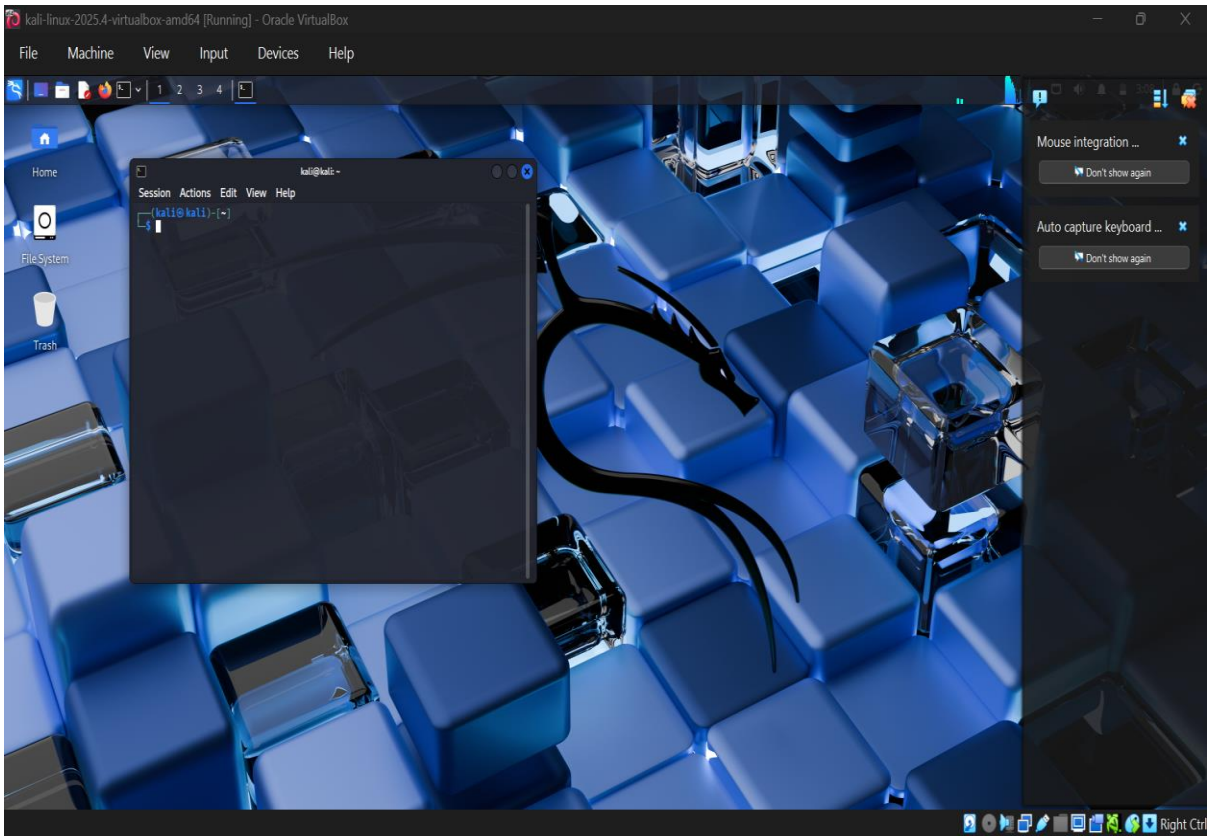

STEP 02: IMPORT WAZUH OVA

IMPORTED THE WAZUH OVA APPLIANCE INTO VIRTUALBOX AND CONFIGURED THE VM RESOURCES

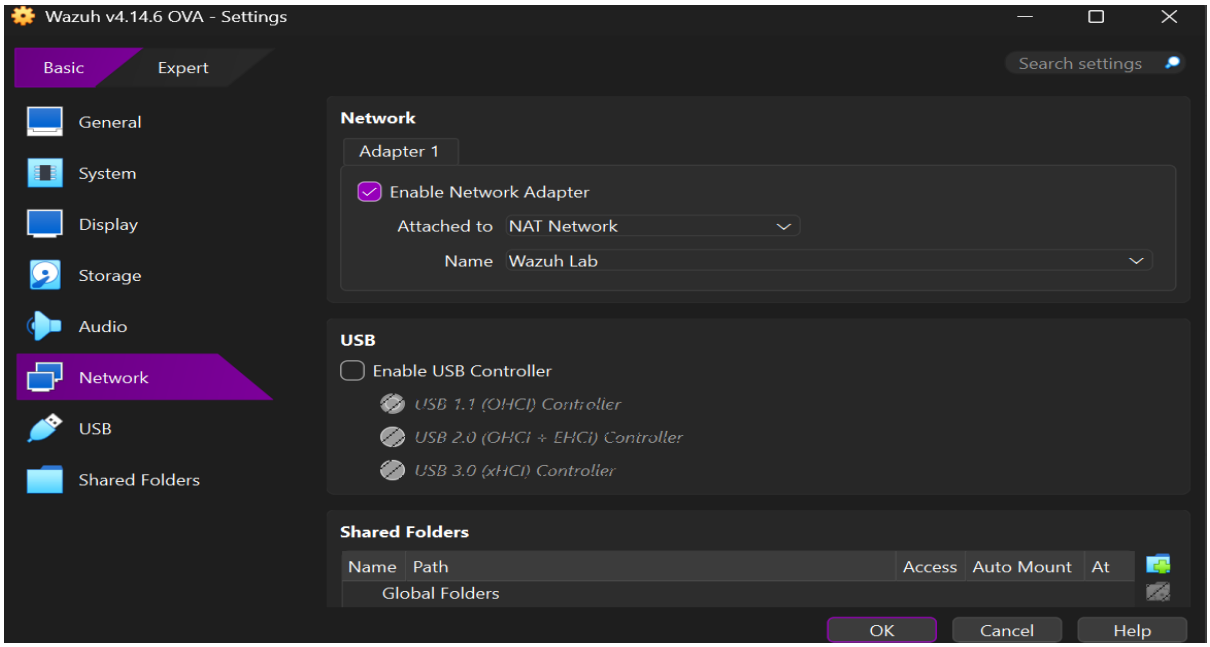

STEP 03: INSTALL KALI LINUX

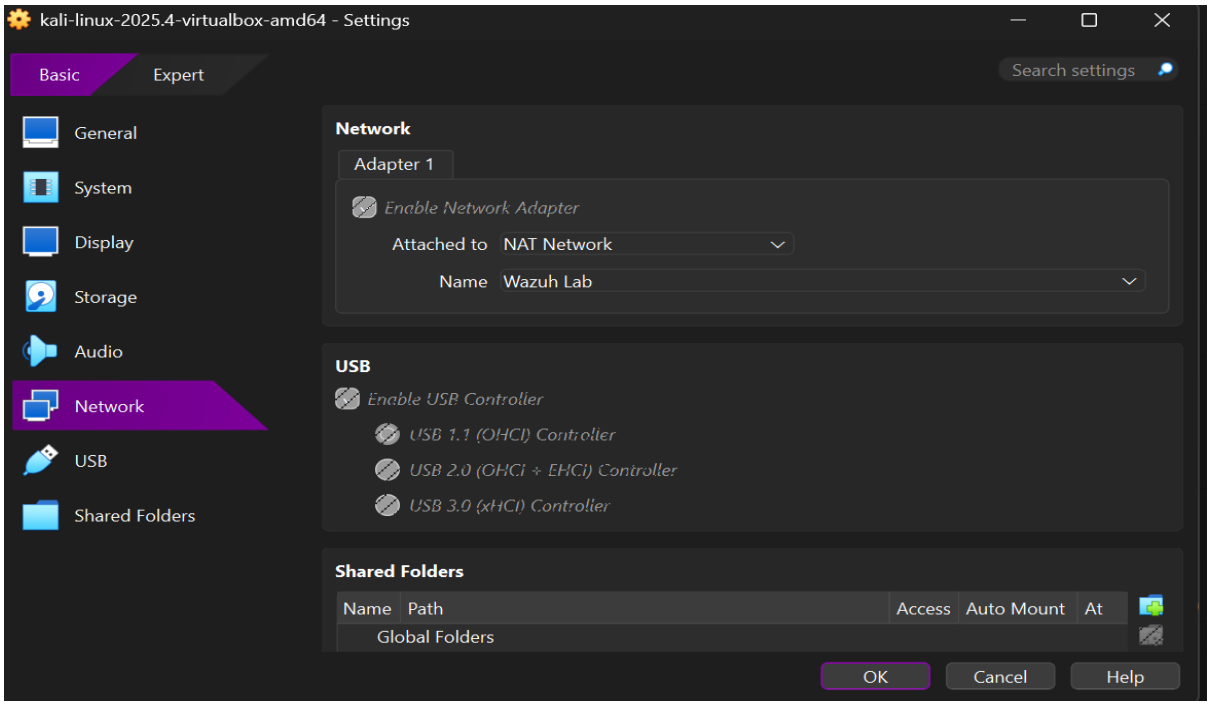

INSTALLED KALI LINUX/RUNNING

STEP 04: NETWORK CONFIGURATION

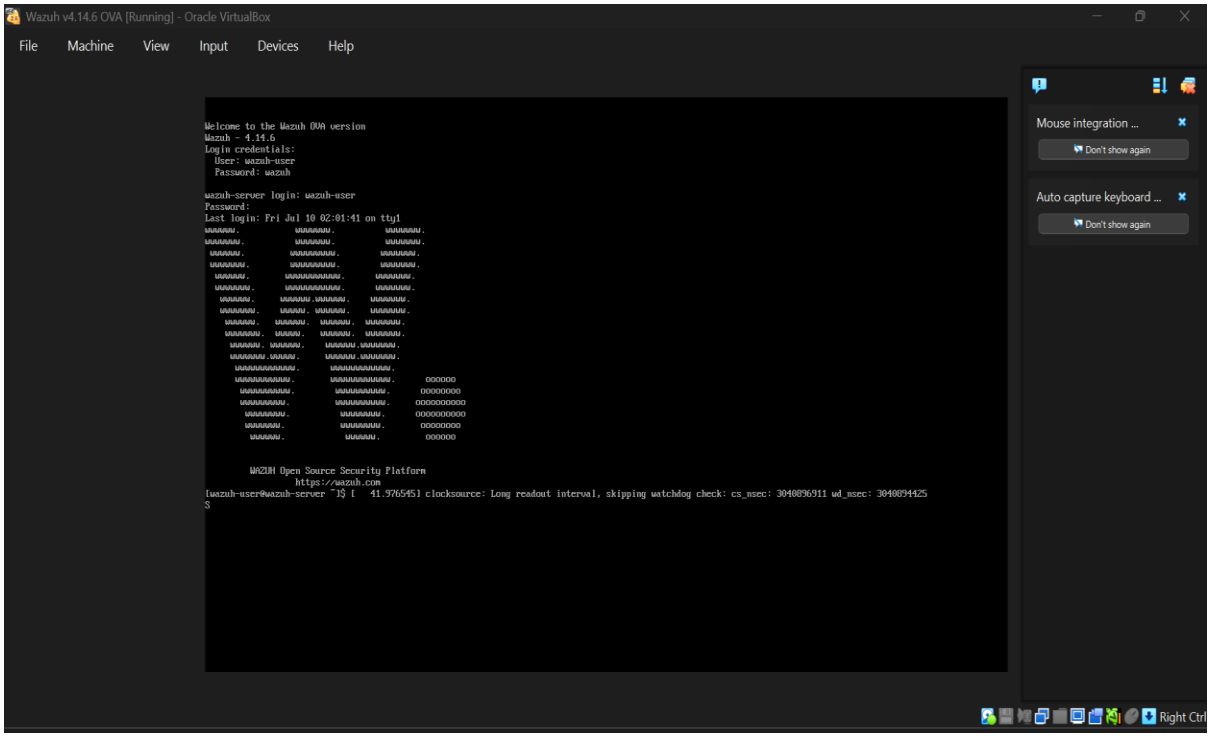

CONFIGURED BOTH VMS TO THE SAME NAT NETWORK

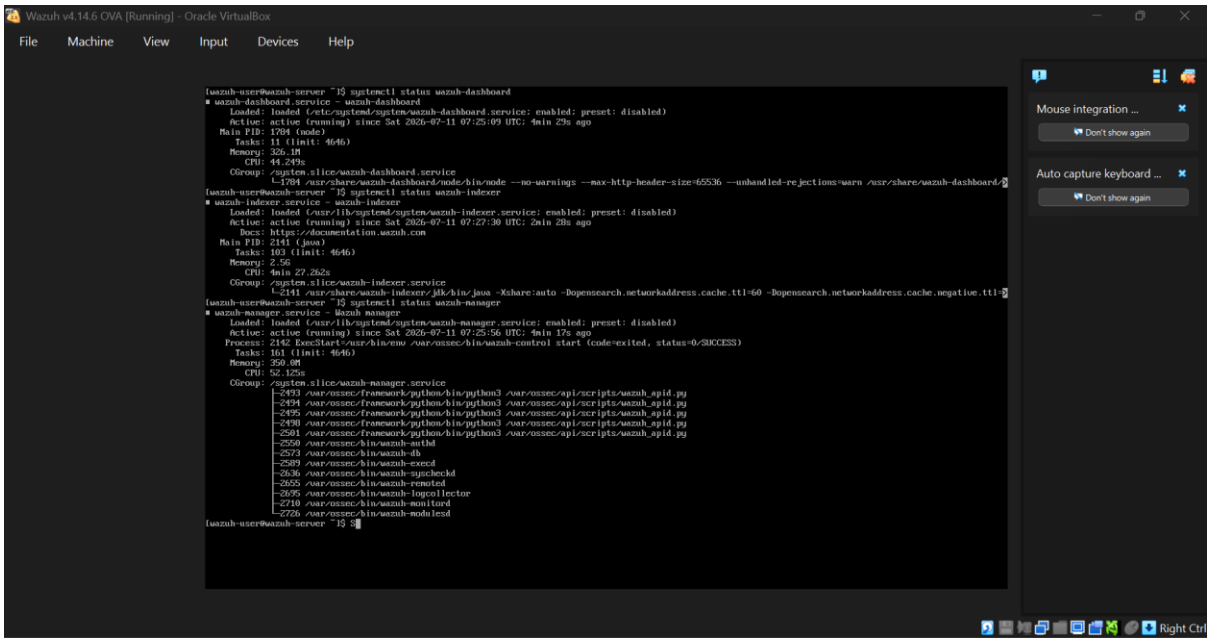

STEP 05: WAZUH VM IMPORTED

BELOW SCREENSHOT SHOWS THAT WAZUH IS SUCESSFULLY IMPORTED AND RUNNING

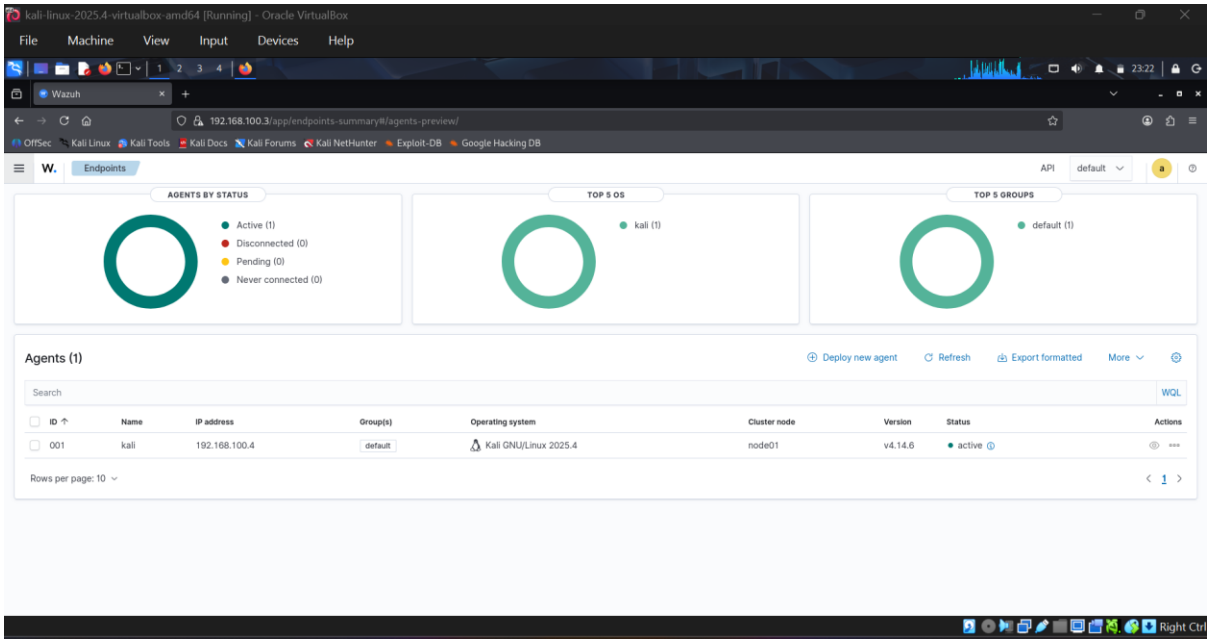

STEP 06: ALL WAZUH SERVICES RUNNING

CHECK ALL WAZUH SERVICES ARE RUNNING THROUGH COMMANDS : (SYSTEMCTL STATUS WAZUH-DASHBOARD, WAZUH-INDEXER, WAZUH-MANAGER)

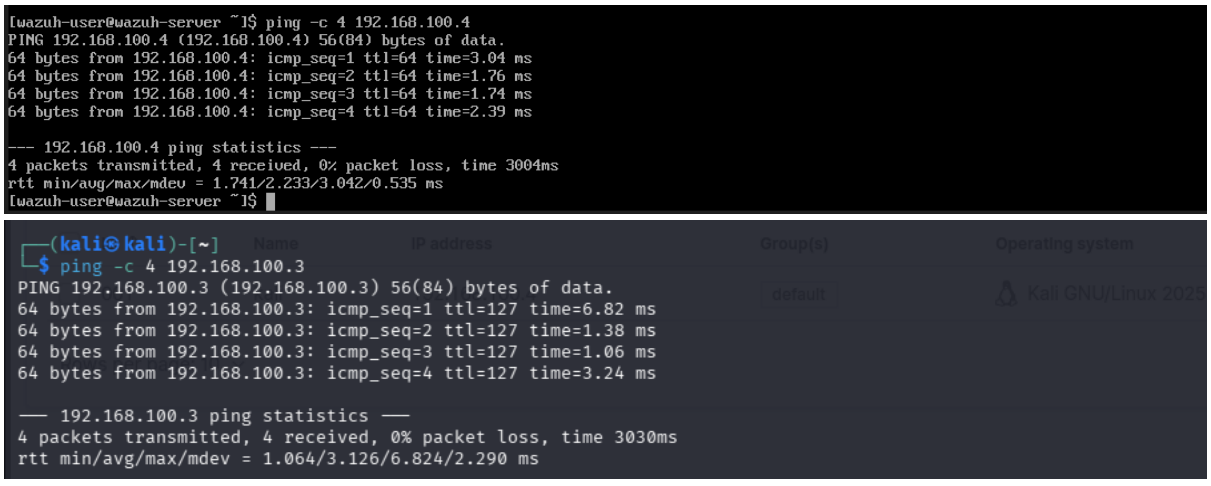

STEP 07: WAZUH DASHBOARD

BELOW SCREENSHOT SHOWS WAZUH DASHBOARD IS ACCESSIBLE AND RUNNING

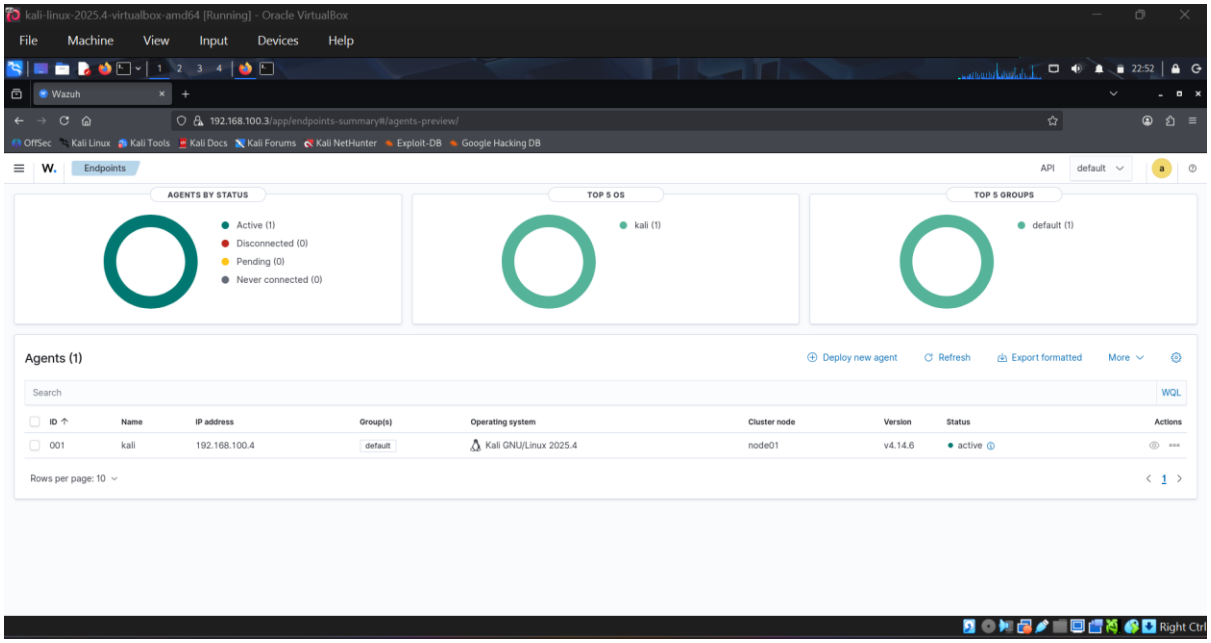

STEP 08: PING BOTH WAYS

BELOW SCREENSHOTS SHOWS BOTH VMS ARE CONNECTING TO EACH OTHER WHEN WE PING

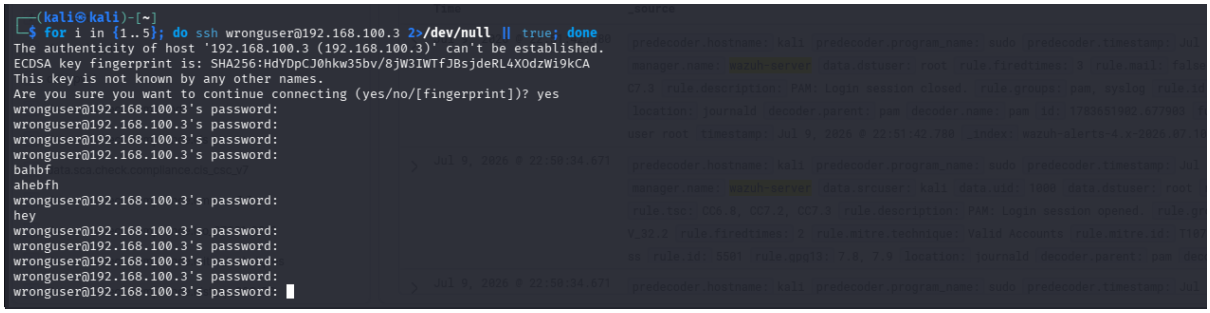

STEP 09: AGENT SHOWS ACTIVE IN WAZUH DASHBOARD

THE AGENT SHOWS ACTIVE AND RUNNING AS KALI 192.168.100.4

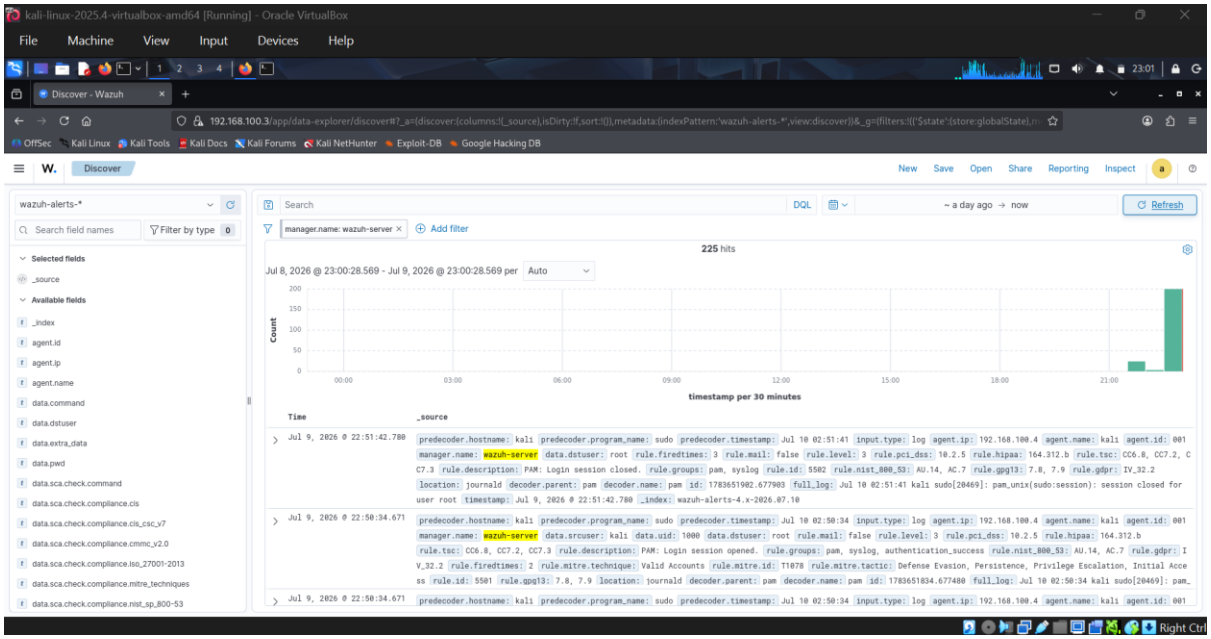

STEP 10: PERFORM ATTACK

PERFORMED SSH ATTACK THROUGH KALI LINUX (THE ATTACKING MACHINE)

STEP 11: TEST EVENT VISIBLE

TEST SCREENSHOT SHOWS THAT ATTACK IS VISIBLE ON WAZUH DASHBOARD

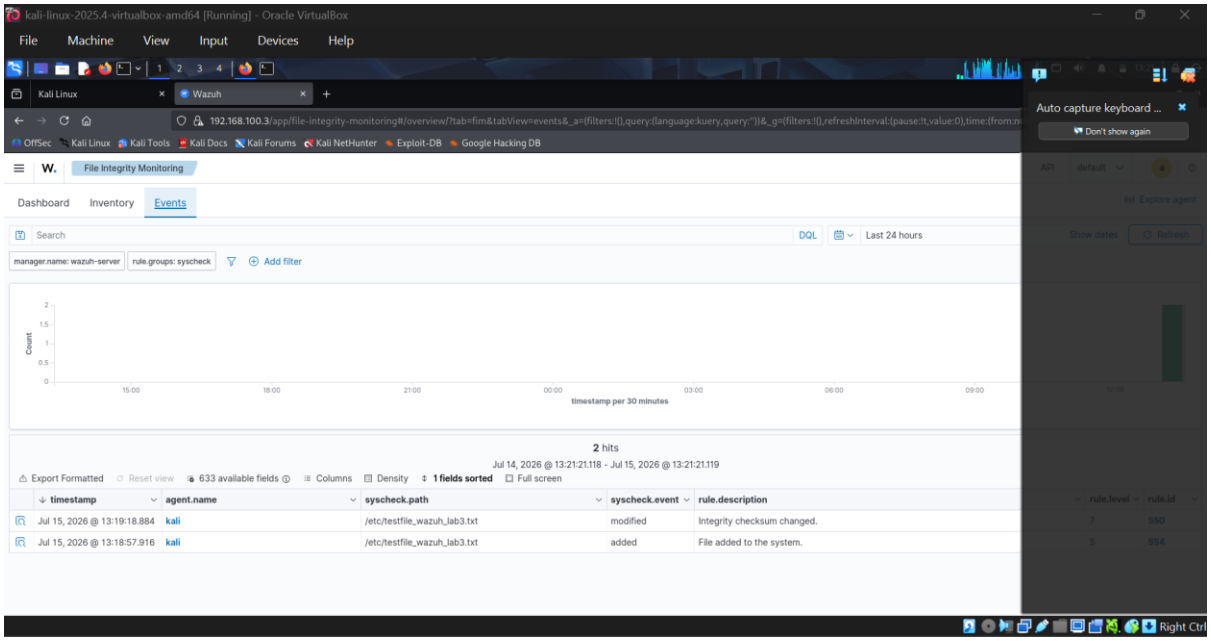

STEP 11: FILE INTEGRITY MONITORING

CREATED A TEST FILE USING (sudo touch /etc/testfile_wazuh_lab3.txt)

RUN TEST USING (sudo 'Wazuh FIM test' | sudo tee /etc/testfile_wazuh_lab3.txt)

```
┌──(kali㉿kali)-[~]
└─$ echo 'Wazuh FIM realtime test 3' | sudo tee /etc/testfile_wazuh_lab3.txt
tee: /etc/testfile_wazuh_lab3.txt: Read-only file system
Wazuh FIM realtime test 3
```

DASHBOARD SHOWING EVENTS :

STEP 12: NETWORK SCAN DETECTION

RUN NMAP SCAN TEST USING (sudo nmap –sS –sV –O 192.168.100.3)

-sS = STEALTH SCAN, –Sv = VERSION DETECTION, -O = OS FINGERPRINTING
